Work Experience

10xMinds

Lead Software Engineer

Sep 2025 - Present

NeuralVest

- Lead engineer of a trade automation application for US Stock Exchange, with true automation, including investments.
- Designed and implemented the entire software architecture and feature suite, and handled deployment using a distributed database and VPS hosting.
- Automations, including perfect execution of cross-platform API calls and queue management, setting up bank relationships and ACH relationships for truly automated investments, and handling the portfolio rebalancing algorithm.

Viewbox Marketplace

- Lead engineer of a digital signage marketplace, which lets users rent screens for displaying their advertisements, based on their requirements, area, customer base, etc.
- Platform offers full centralized control of media playlists, and full control over screens for screen owners.
- Platform is currently live as **Viewbox**, offering the digital signage feature for screen owners to display their own advertisements on screens powered by Android.
- OS support for Tizen and WebOS, and the marketplace platform is currently under development.

Software Developer

Apr 2025 - Sep 2025

- Implemented platform subscription flow, chat module, and workout-related features for BeyondMetrics, a fitness application
- Performed app enhancements such as preloading images with blurhashes and client-side query loading using TanStack.

Software Developer Intern

Apr 2024 - Mar 2025

- Worked on theme customization of graphs for Formance.
- Worked on the trainer-side interface, including week creation, client weight tracking, and finance reports on the admin-side.

Education

2021 - 2025	B. Tech in Computer Science	Government Engineering College, Thrissur	8.32 CGPA
2019 -2021	Higher Secondary	Rajagiri Public School, Kalamassery	97.6% Marks

Projects

Perch - Waitlist Platform with Web3 Vouching - A centralized waitlist platform, targeted at restaurants, clinics, hospitals, etc which helps users get notified when they are up for their turn. Web3 features such as payment vouching using Ethereum Layer 2 tokens are currently under development.

DocVault - Truly Offline vault and Expiry tracker - A fully offline document vault, with an optional online-sync feature. This mainly targets keeping documents safe and tracking the expiry of bills or other papers

Channel-Based Chat App - A chat application built on Django using channels, enabling private as well as room-based messaging.

School Bus Tracking App - An app that utilizes OSM and a routing engine for tracking the location of school buses, ensuring an entirely open-source solution.

BookMyDoc - It is a proximity-oriented clinic booking app aimed at local clinics' adoption.
